Fate/Grail Tactics on Foundry Beginner's Guide

How to join, play and run a war in the F/GT system for Foundry VTT.

Written for the Normal ruleset, Great Holy Grail War, two factions. October 2026.

12. Quick reference

PART 1 · EVERYONE

1. Joining the game

Your GM sends you a link that ends in `/join`. Open it in Chrome, Edge or Firefox on a computer. A screen at least 1024 × 768 is needed; 1920 × 1080 is best.

1. Pick your user name in the first box, for example **Player2**.
2. Type the password the GM gave you.
3. Press **Join Game Session**.

The join screen. Pick your user, type the password, join.

The first time you join, Foundry may open a **User Configuration** window. You can close it.

2. The game in two minutes

F/GT is a tactical wargame on a square grid. Each square is a **panel**. Two **factions** fight; each player controls one faction.

- **Servants** are your fighters: Saber, Archer, Lancer, Rider, Caster, Assassin and Berserker.
- Each Servant has a **Master**. Masters are weak, but they hold Command Spells and keep their Servant strong. A Servant far from its Master fights worse.
- Each faction starts in its **home base**: the coloured rows at its edge of the board.
- A **Turn** belongs to a faction, not to one unit. In your Turn you move and attack with several units.
- A **Round** is one Turn for each faction, plus a short GM slot. The order is rolled again every Round.
- Durations are written in ◈. One ◈ is one Round's worth of Turns, 3 in this war.

How you win

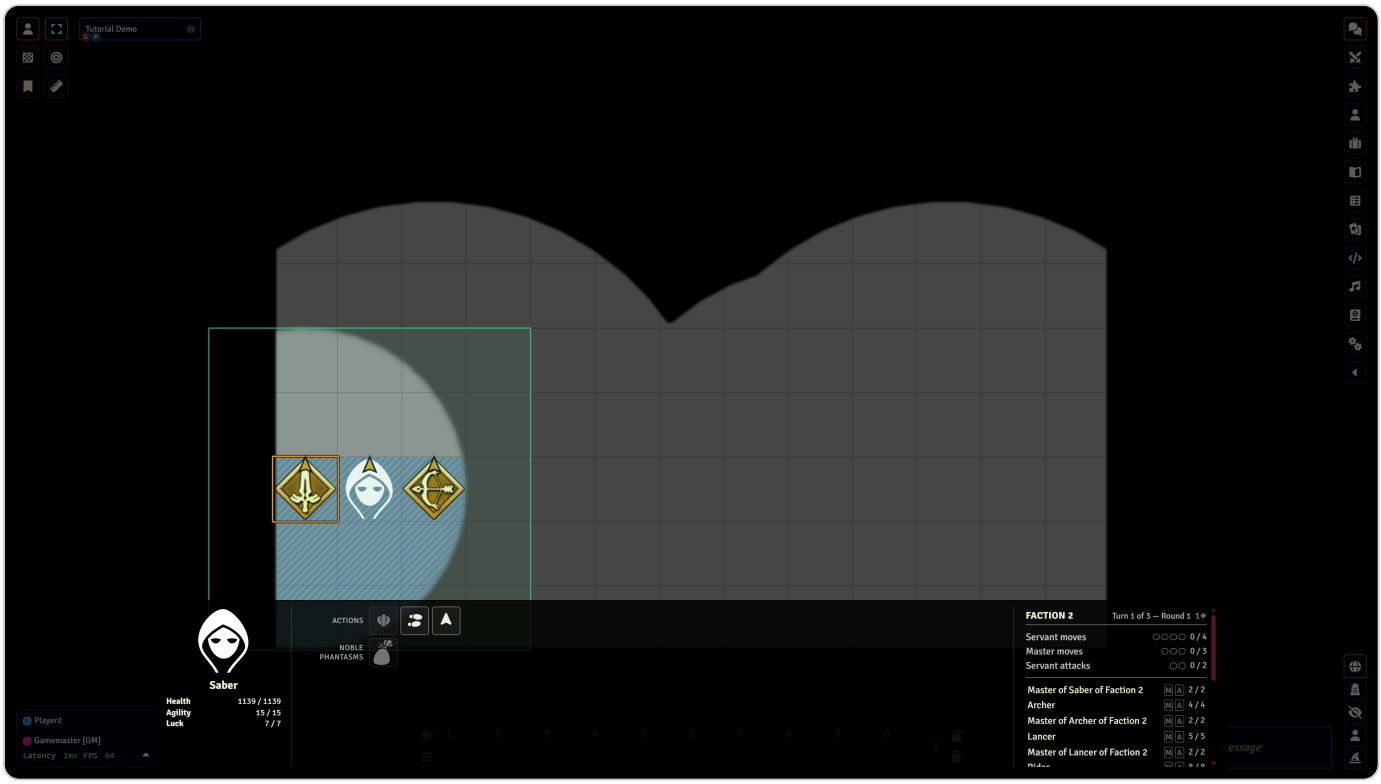

- **Elimination.** Your faction is the last one standing.
- **The Holy Grail.** After 9 Servants are defeated, the Grail appears on the board. Hold a unit next to it for a full Round, with no enemy within 2 panels, and you win.

The numbers on a unit

Stat	What it does
Health	Damage taken comes off this. At 0 the unit is defeated.
Agility	Used to Evade. A big hit also drains it.
Luck	Spent on Luck Checks, 1 per try.
MOV	How many panels the unit can move in one Move.
Range	How far its Normal Attack reaches.
BA (STR) / BA (MAG)	Base Attack: the starting damage of its attacks.
Sustainability	How long a Servant survives without a Master.

PART 2 · PLAYERS

3. Your screen

Player2 with their Saber selected. You only see what your units can see.

- **The board** fills the middle. Dark areas are out of sight. Click one of your tokens to see through it.
- **The action bar** runs along the bottom when you select one of your units.
- **The turn panel** sits at the right end of the action bar. It shows whose Turn it is and what your faction has left.
- **The sidebar** on the far right holds the chat log. Attack cards appear there.

The action bar

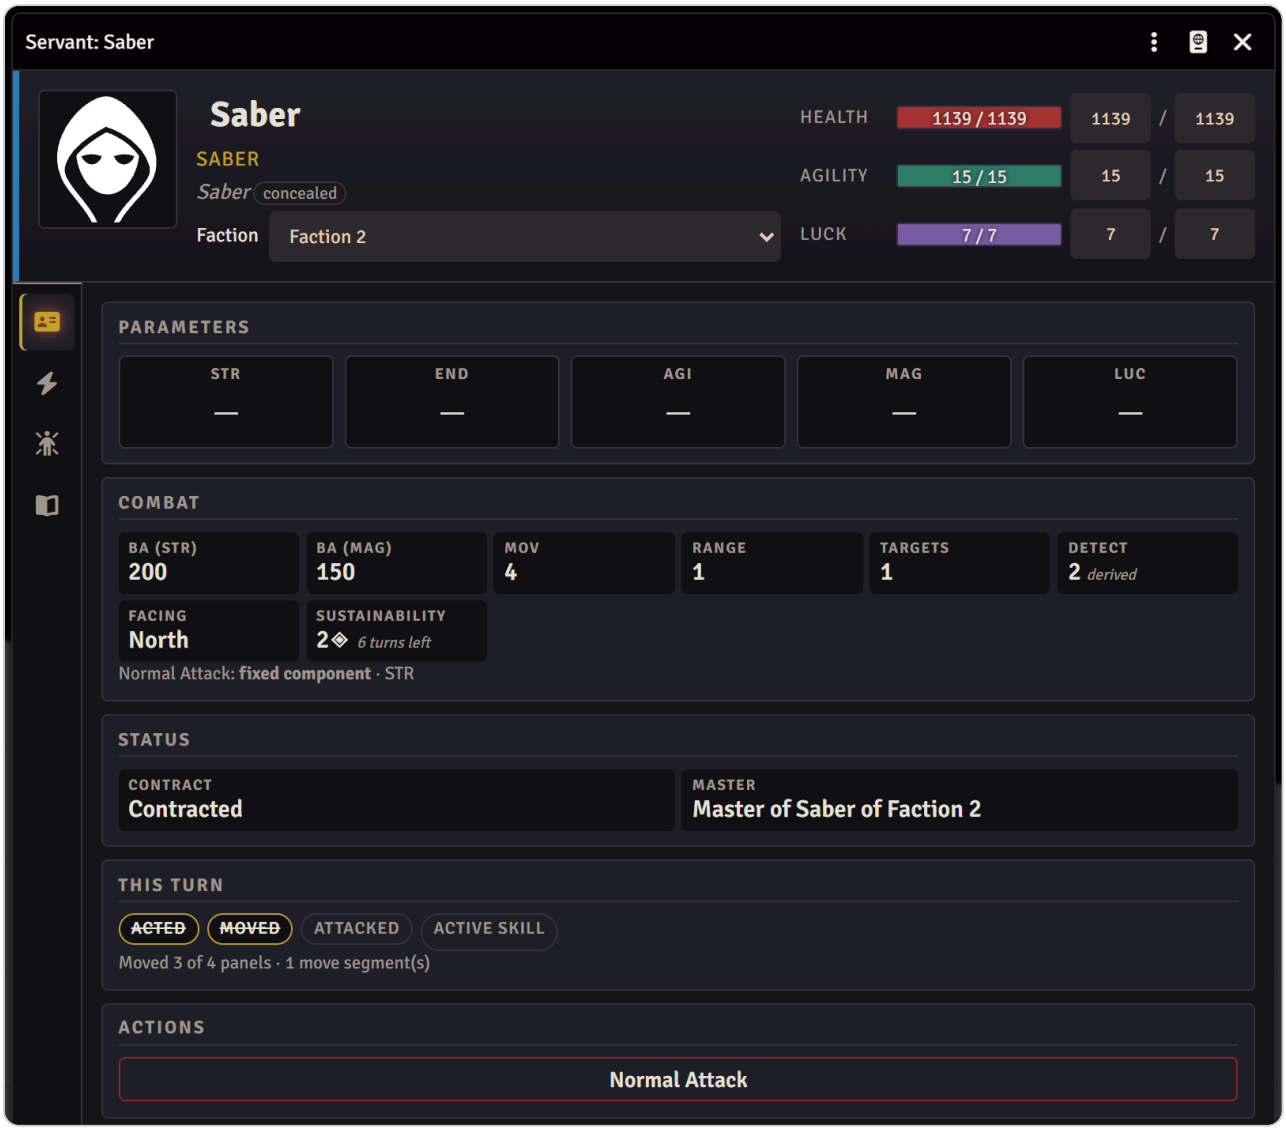

Left: the selected unit. Middle: what it can do. Right: the turn panel.

- **Actions**: Attack, Move, Facing and more.
- **Noble Phantasms**: the Servant's big moves. They unlock in Round 6 (Assassin in Round 4).

- A greyed button tells you why when you hover it, for example "*no attacks are permitted during the first Round*".

The unit sheet

Double-click a token to open its sheet. It shows every stat, its Master and what it did this Turn.

The Saber's sheet. **This Turn** shows it already moved.

4. Your Turn: move and attack

The turn panel says **Turn 1 of 3 — Round 2** and lists your faction's budget for this Turn:

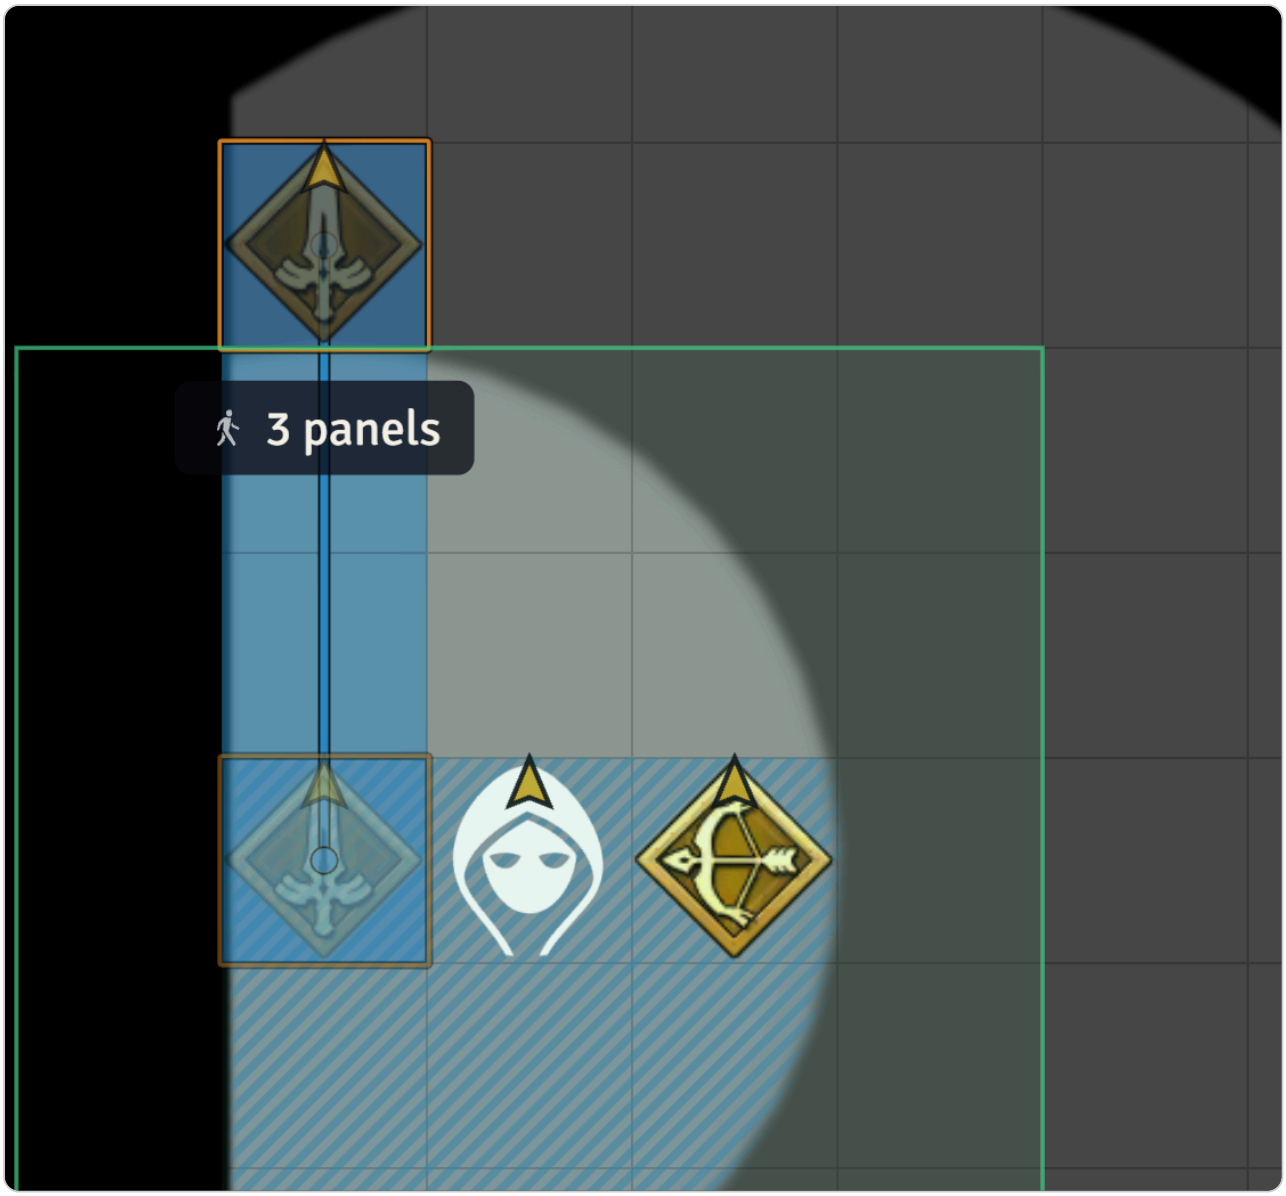

Budget	Per Turn
Servant moves	up to 4 Servants may move
Master moves	up to 3 Masters may move
Servant attacks	up to 2 Servants may attack

Each unit gets **one Move and one Attack** per Turn, in either order: Move then Attack, or Attack then Move. Never Move, Attack and Move again. Using an active Skill counts as that unit's move.

> **Round 1 has no attacks.** Use it to move into position. Attacks open in Round 2.

Moving

1. Click **Move** on the action bar, or just start dragging.
2. Drag the token to its new panel. A label shows how many panels the path uses.
3. Let go. The move is checked step by step; an illegal move is refused.

Dragging a Saber three panels. Movement counts straight steps, not diagonals.

> If you are controlling several tokens, Foundry drags all of them. Click an empty spot first, then drag one token.

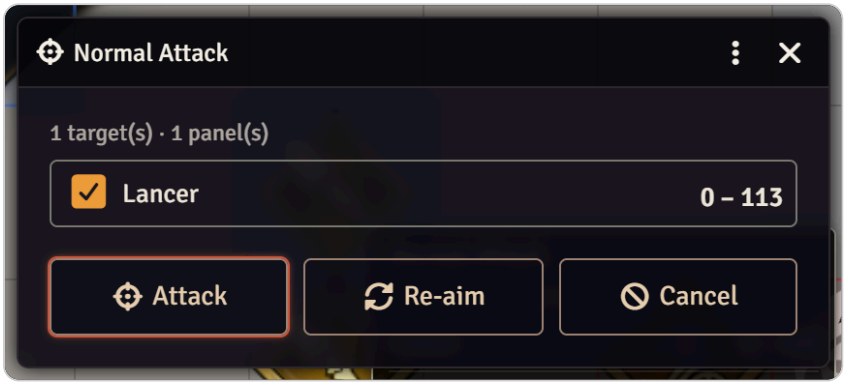

Attacking

1. Select your Servant and click **Attack**.
2. Hover an enemy. A preview shows the damage range and **✓ Legal — click to confirm**, or why it is not legal.
3. Click the target. A review window opens.
4. Press **Attack**. **Re-aim** picks again; **Cancel** spends nothing.

Right-click or `Esc` cancels while you aim. `Tab` cycles through legal targets.

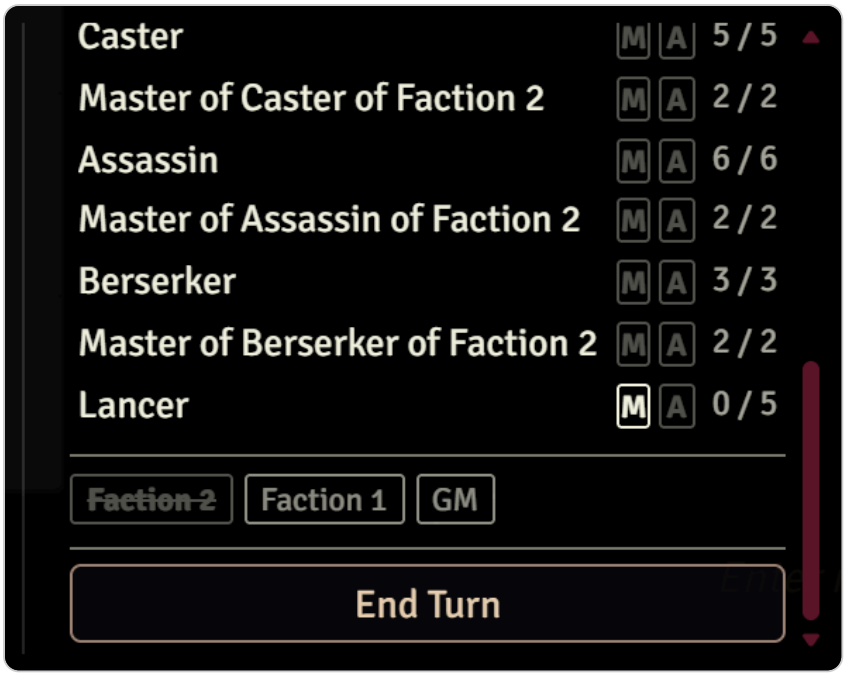

Aiming. The tooltip shows the possible damage before you commit.

The review window.

Ending your Turn

When you are done, press **End Turn** at the bottom of the turn panel. On a small screen, scroll the turn panel down to reach it.

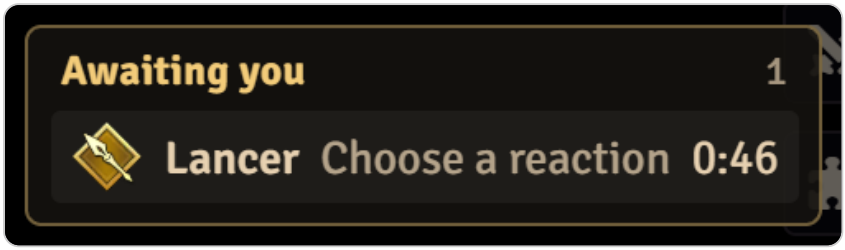

M lights up when a unit moved, **A** when it attacked. The strip shows the order this Round.

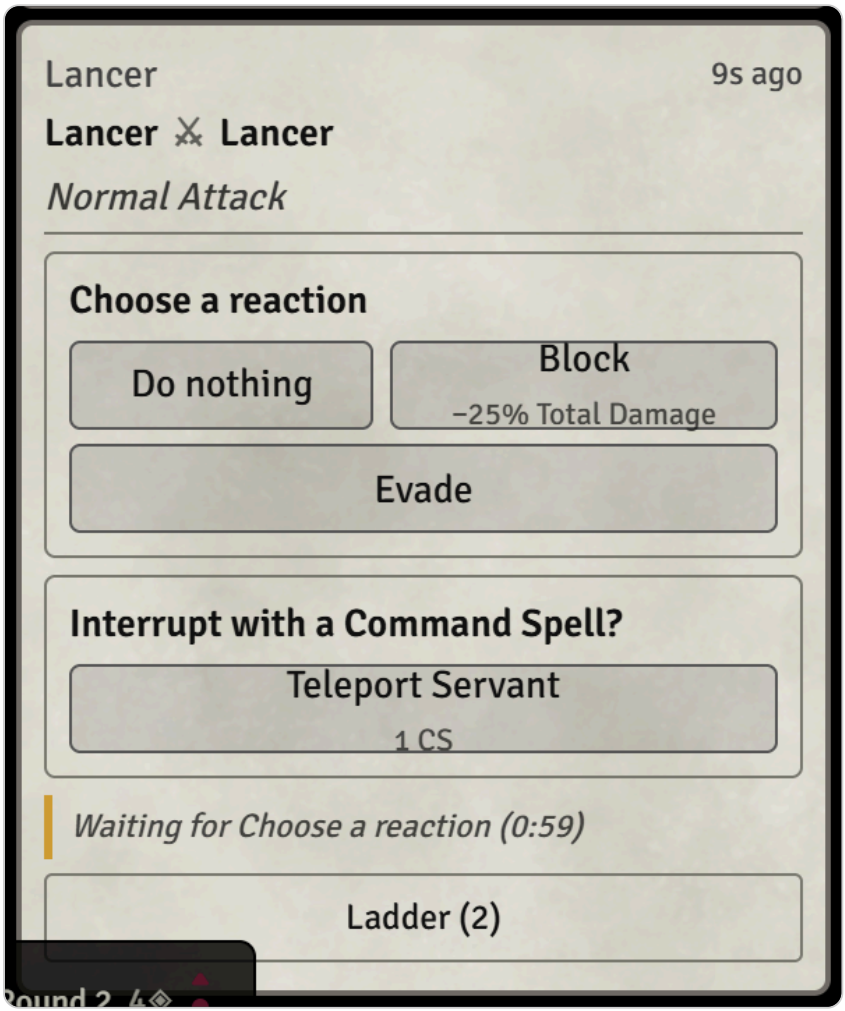

End Turn is greyed out while a rule forces you to do something first. The panel lists what is still owed.

5. When you are attacked

An attack creates a card in the chat log. If the decision is yours, the **Awaiting you** panel appears near the top of the screen with a countdown. Click a row to jump to its card.

Something is waiting on you, and how long you have.

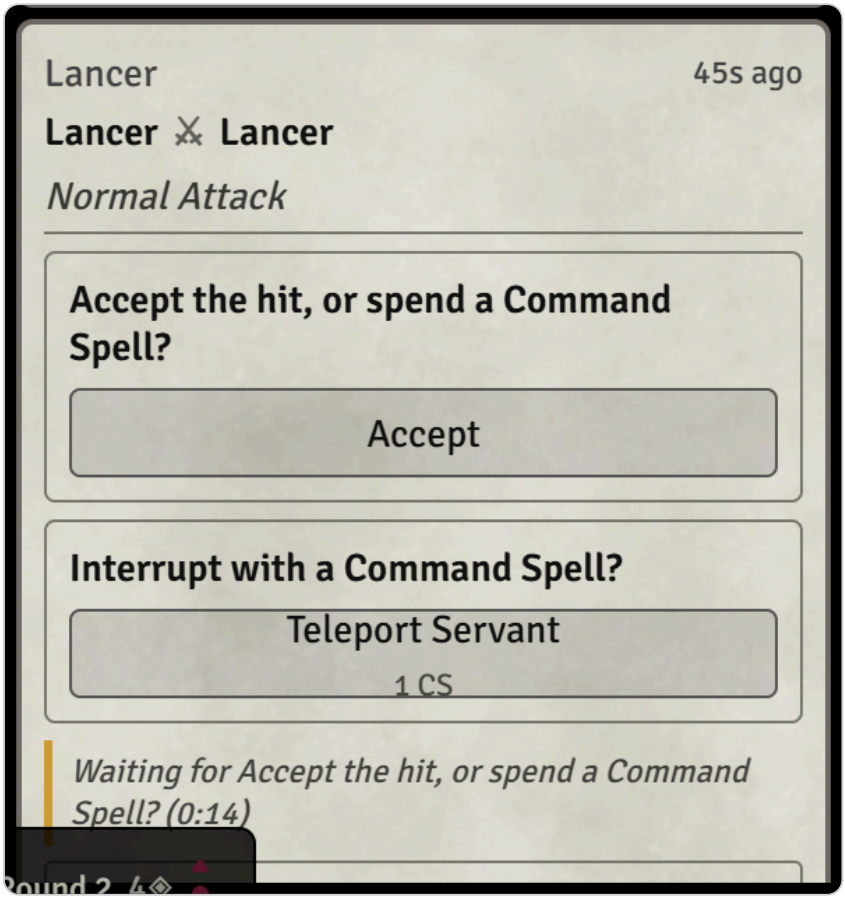

Choose a reaction on the card itself.

Button	What happens
Do nothing	Take the hit.
Block	Take the hit, but 25% less damage.
Evade	Roll against Agility. On a success the attack misses. On a failure you take the full hit.

You have **60 seconds** to react. If time runs out, the game picks the option that costs nothing, which is **Do nothing**.

After a failed Evade the card may ask **Accept the hit, or spend a Command Spell?** Press **Accept**, or spend a Command Spell to escape.

A Luck Check offer. Contesting costs 1 Luck whether it works or not.

> On **Intermediate** difficulty, the one this war uses, Luck Checks are switched off. If a Luck contest still shows up, it is declined for you within seconds. You do not need to press anything.

If your Servant survives and the attacker is in its Range, the card may then offer **Counter**. A Counter is an attack back; it cannot itself be countered.

6. Reading an attack card

When the attack is resolved, the card shows the damage in large numbers. Press **Damage breakdown** to see every step.

Lancer 4m 7s ago

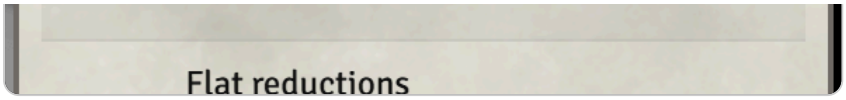

Lancer ⚔ Lancer

Normal Attack

99

Damage breakdown

0	Precondition		—	0
1	**Base** BA(STR) +125 *self BA(STR) × 1*		+125	**125**
2	**Crit** Attack+ +29 *5d10 = 29*		+29	**154**
3	Ability multiplier		—	154
4	**Combined percent** × +0% → ×1.00		—	**154**
5	Component amplification		—	154
6	Band		—	154
7	Flat attack bonuses		—	154
8	Environment		—	154
9	**ZON penalty** ZON penalty −32 *outside the Master's ZON*		−32	**122**
10	Luck: Increased Damage		—	122
11	Resistance		—	122

99 damage. The ZON penalty line shows the attacker was too far from its Master.

- **Damage breakdown**: every modifier, in order.
- **Rolls**: the dice that were rolled.
- **Ladder**: each step of the exchange, such as react → evade, evadeRoll → fail.
- Some numbers belong to the other side. The card says "*1 hidden — the other side's*" instead of showing them.

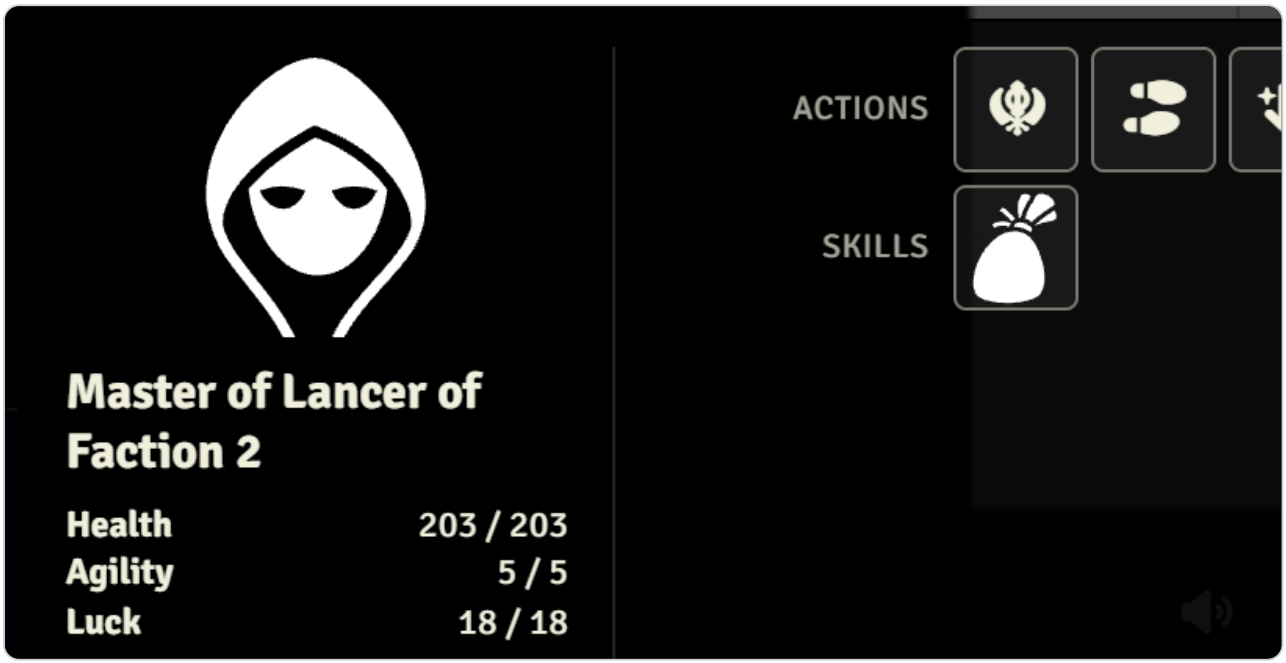

7. Masters and Command Spells

Keep each Master near its Servant. A Servant outside its Master's **ZON** loses 5d10 damage on attacks and cannot use its Noble Phantasm. A Master's attacks on Servants are weak, and a Servant's hit can defeat a Master outright.

Command Spells

Each Master holds a few **Command Spells**. They are single-use orders: heal, teleport, boost damage, block damage and more. They are shown on the Master's sheet.

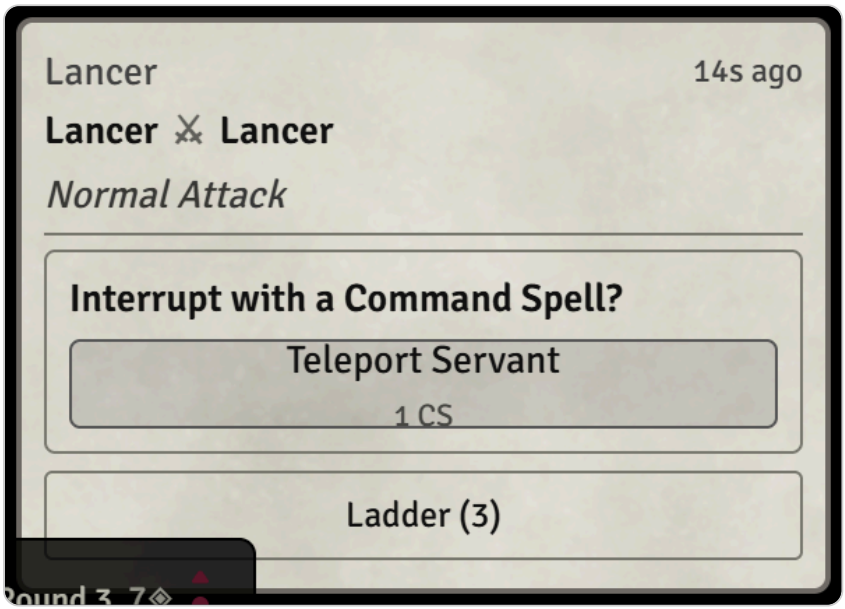

- **On your own Turn:** select the Master and press **Command Spell** on its action bar.
- **Before your attack:** a **Before the attack** card offers boosts such as **Damage Up**. Press one, or **Continue**.
- **During an attack:** the card shows **Interrupt with a Command Spell?** with the commands that are legal right now.

A Master's action bar. The hand icon is **Command Spell**.

The attacker's Master may boost the attack first.

The card pauses so a Master can step in.

> Each Command Spell window waits up to **45 seconds**, then moves on by itself. Nobody needs to press anything. A timeout never spends a Command Spell.

PART 3 · THE GM

8. GM: before the session

Give every user a password

The join link is public. Anyone who has it can pick a user, so set a password on **every** user, the Gamemaster first. Leaving the Gamemaster without one hands out full control.

1. From the game, open the **Settings** tab of the sidebar, then **User Management** under Game Access. Or go to `/players`.
2. Type a password in each row.
3. Press **Save and Return**, then send each player their own password.

User Management. One row per user.

Factions and players

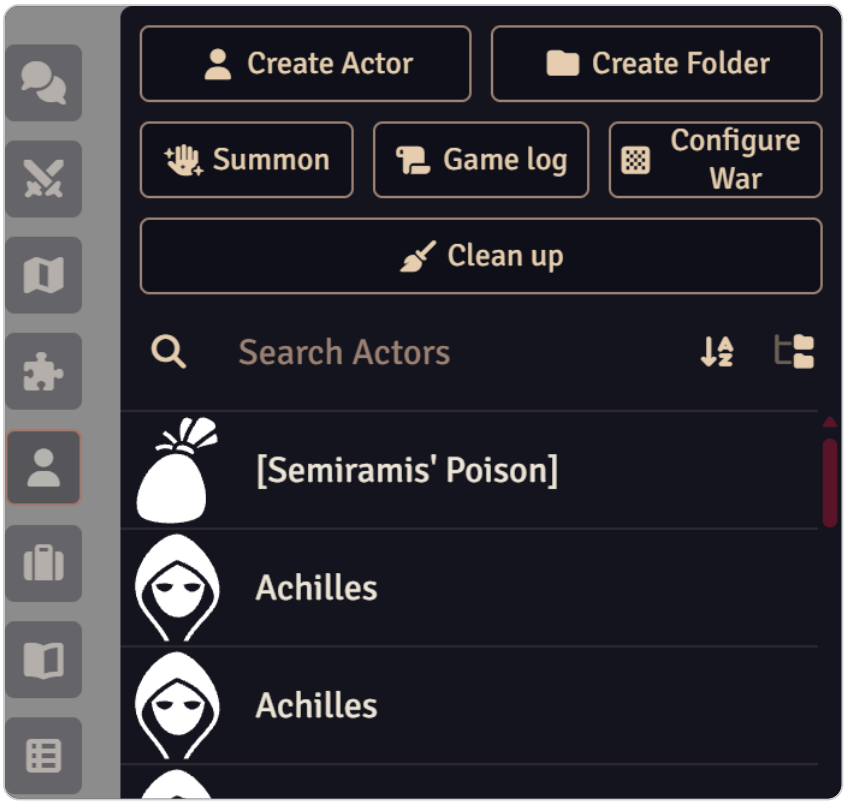

Each faction lists the users who play it. Change colours, players and alliances under **Settings → Game Settings → Fate/Grail Tactics → Manage Factions**. In this world Player1 plays Faction 1 and Player2 plays Faction 2.

Optional: clear the chat

Old test wars leave many cards in the chat log. Clearing it before a session makes new cards easy to find.

9. GM: building a war

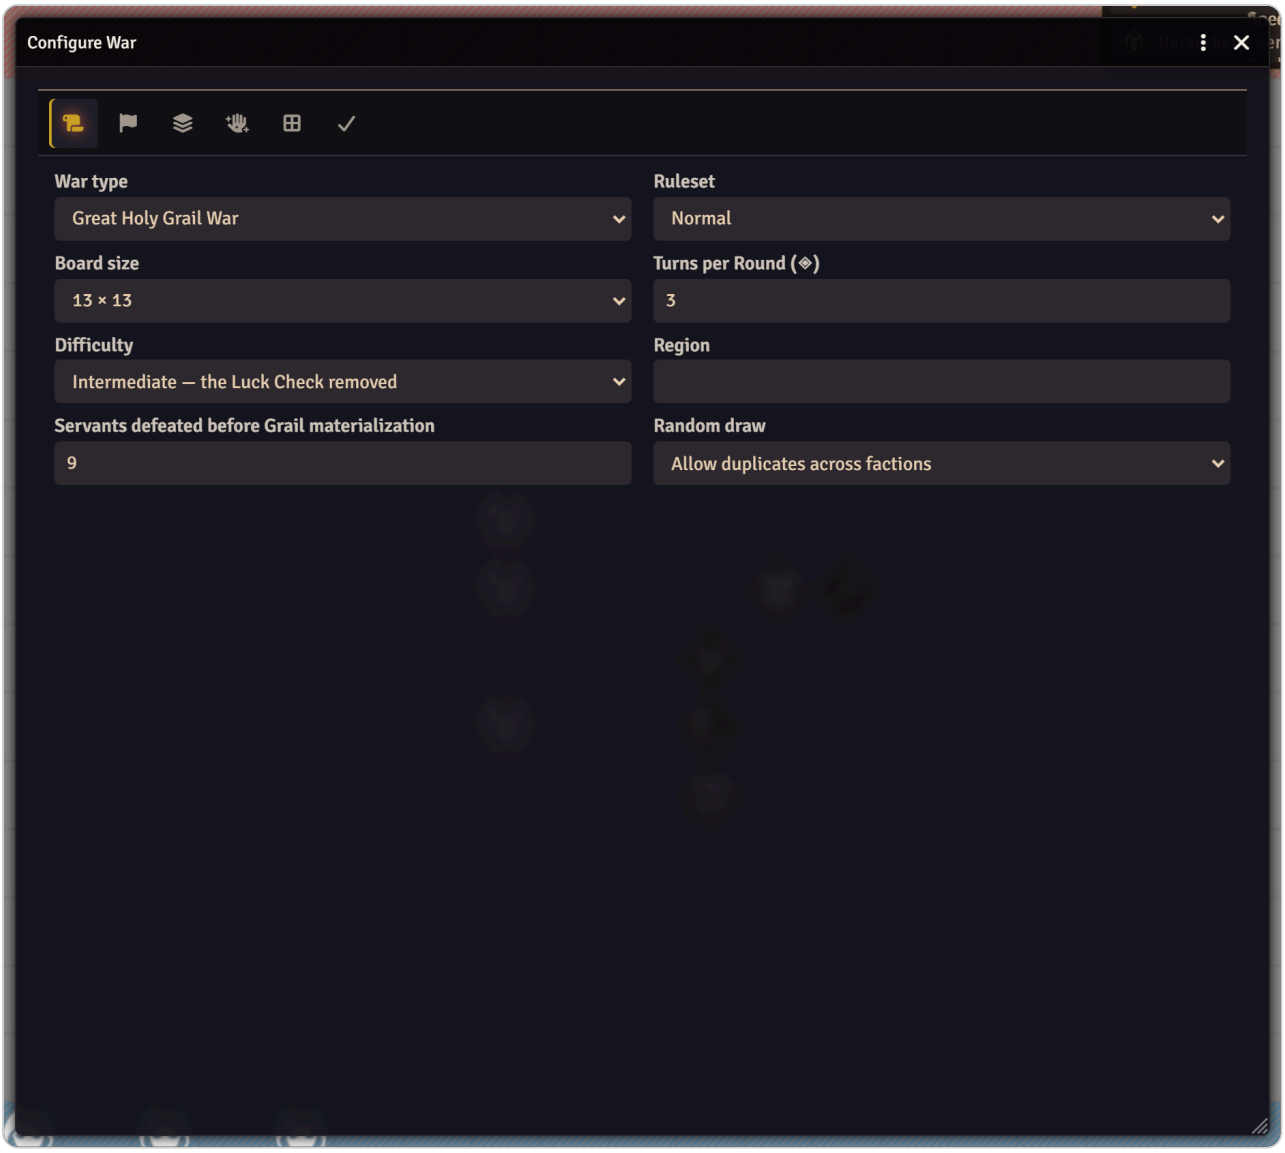

Everything starts from the **Actors** tab of the sidebar. The F/GT buttons sit at its top.

Configure War opens the setup wizard. **Game log** and **Clean up** are covered below.

The wizard has six tabs. Work left to right.

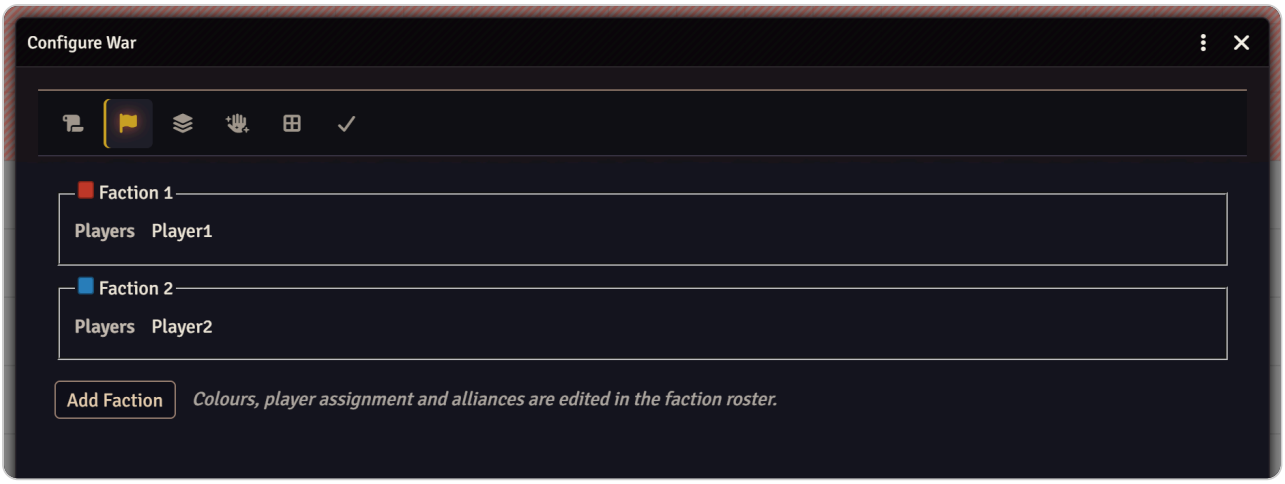

War

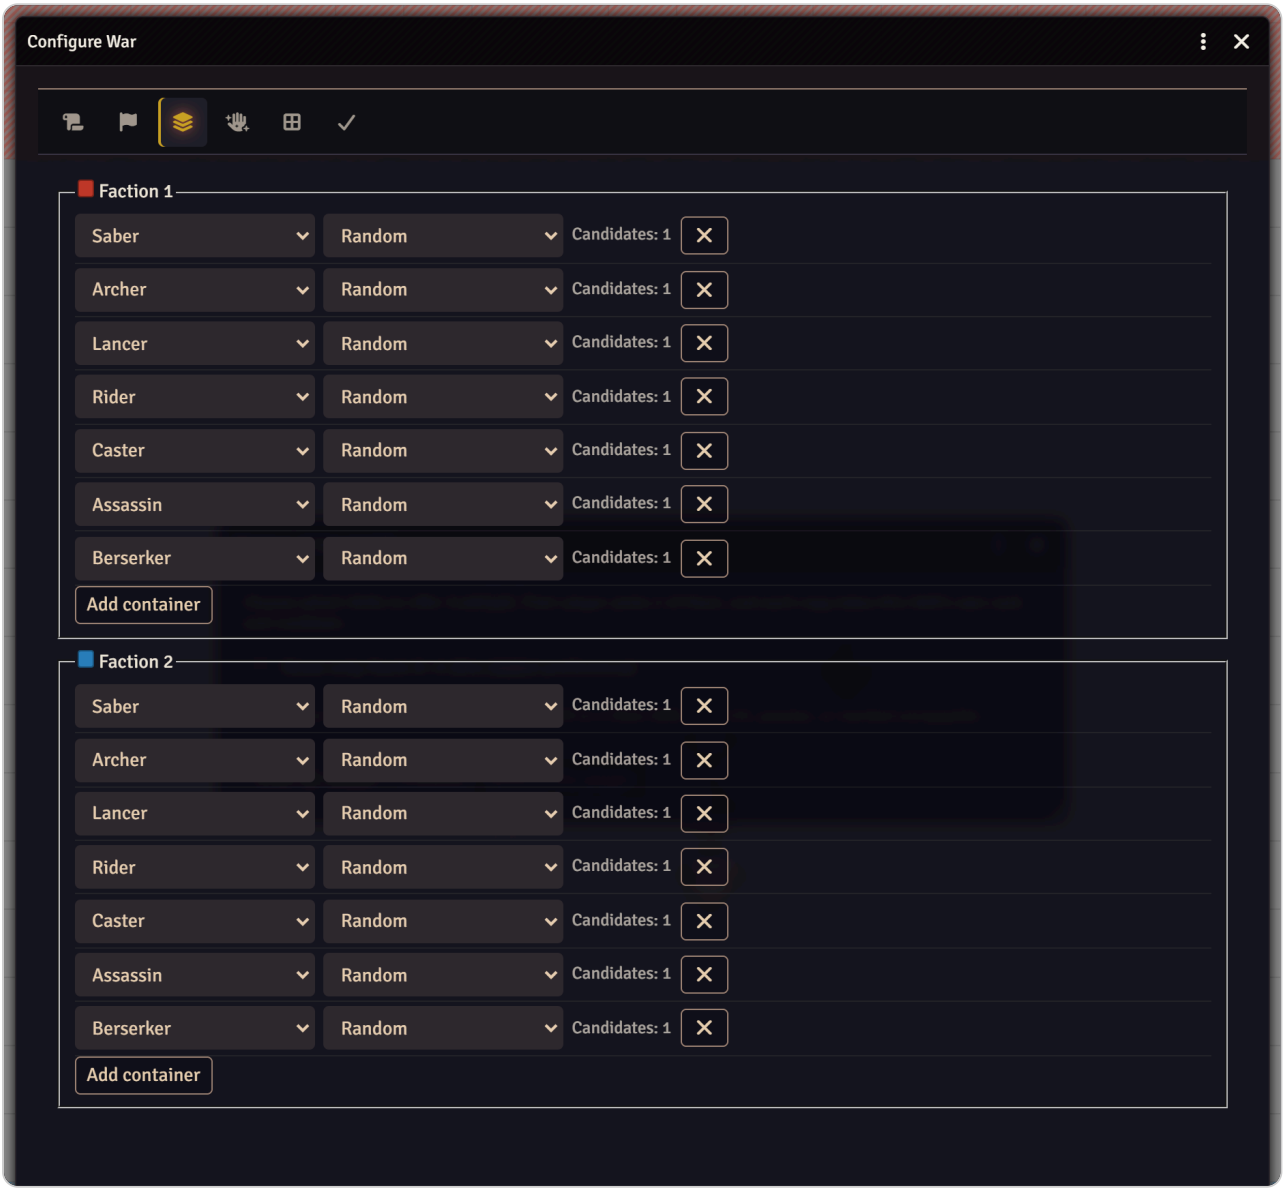

The settings used for this war.

- **Ruleset Normal** uses the seven generic class Servants. **Advanced** uses the named Servants.
- **Difficulty**: Beginner removes damage modifiers and Luck Checks; Intermediate removes Luck Checks; Expert removes nothing.
- Leave **Region** empty for a neutral board.

Factions and Containers

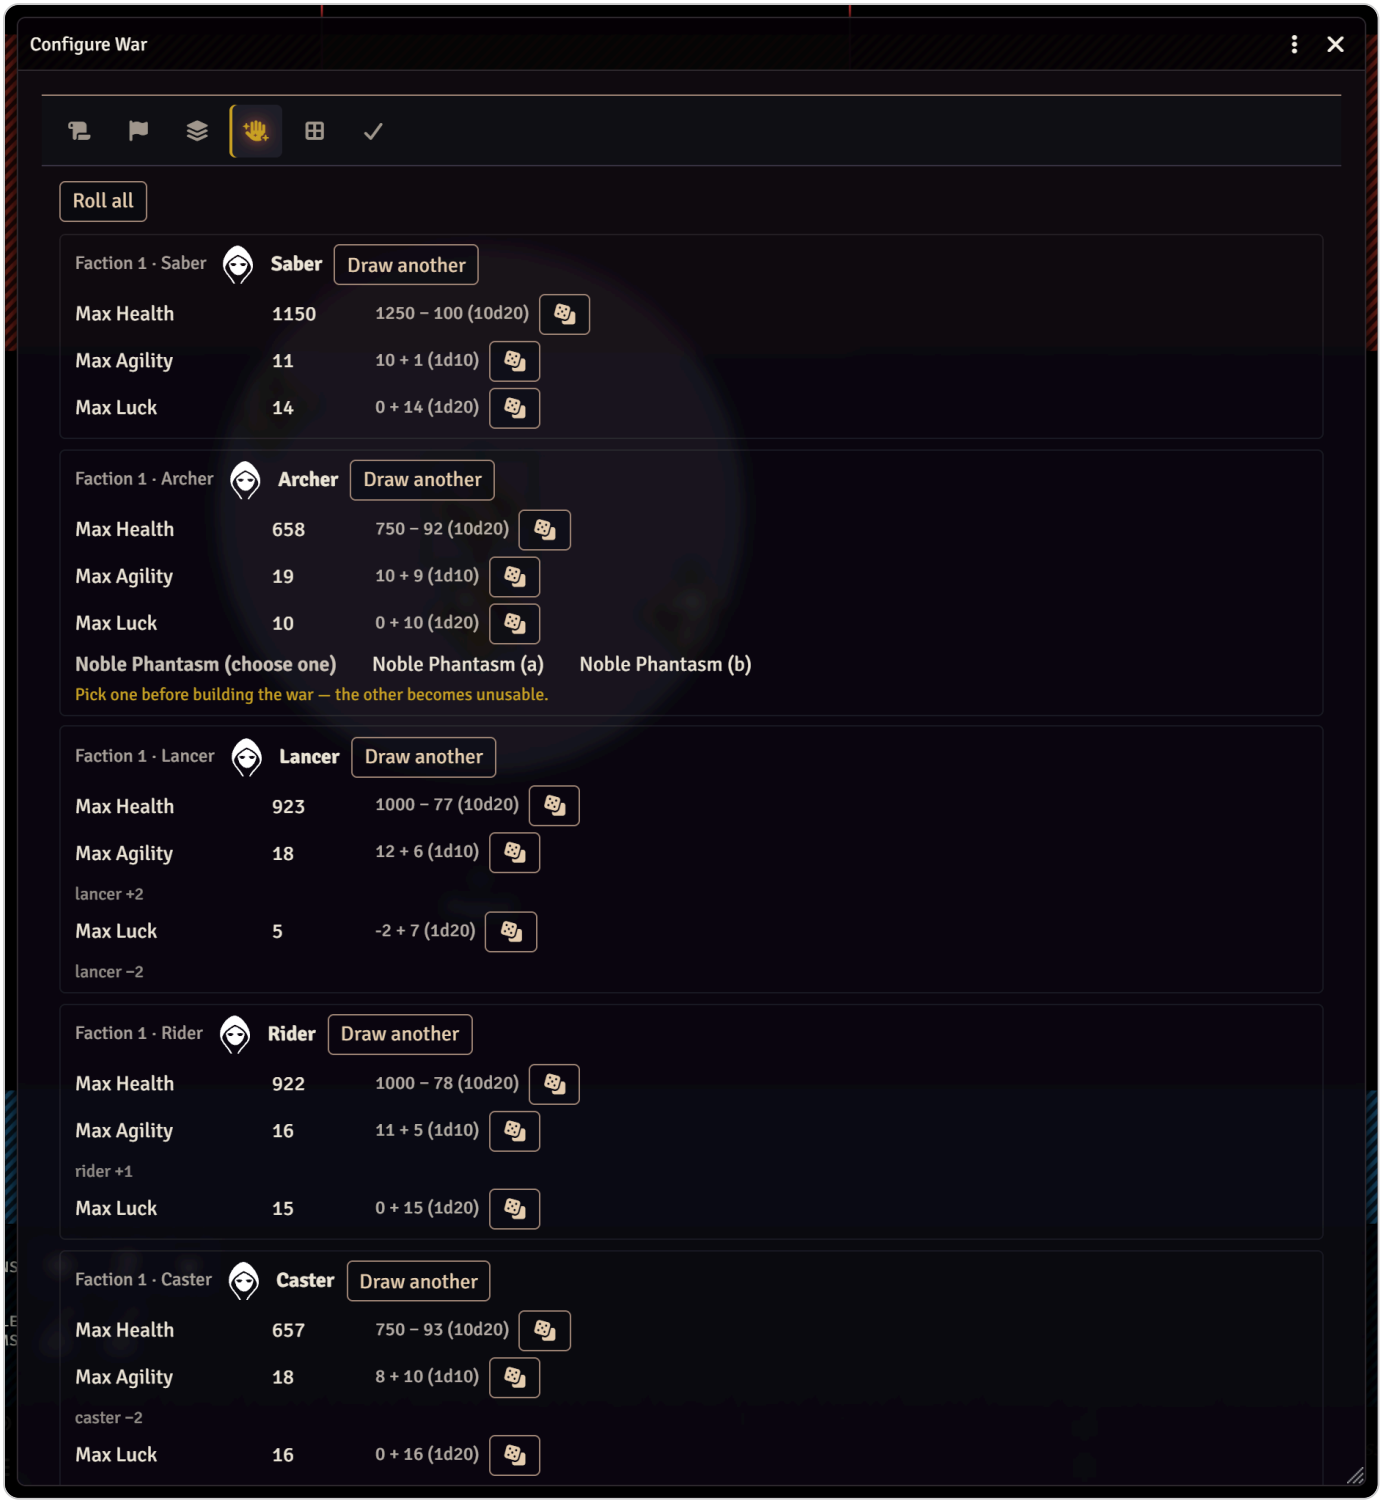

Who plays which side.

One container per class and faction. **Random** draws a Servant; **Fixed** lets you pick.

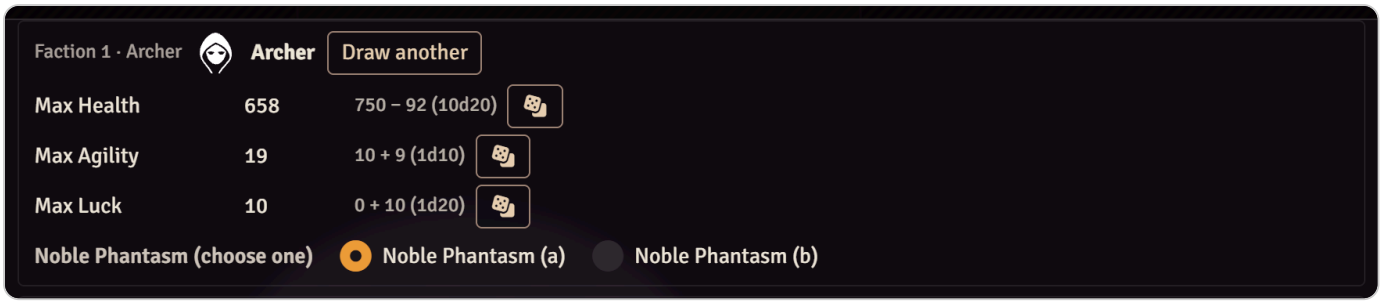

Servants

Press **Roll all**. Each Servant's Health, Agility and Luck are rolled and shown with the dice.
Re-roll a single line with its dice button, or a whole Servant with **Draw another**.

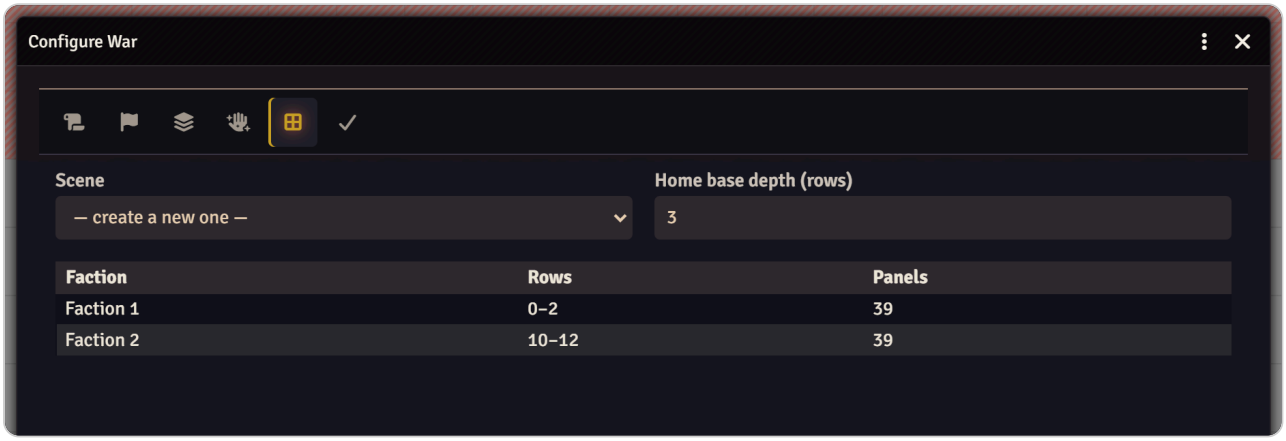

Normal Servants roll Health as base ± 10d20, Agility 10 + 1d10 and Luck 1d20, with class bonuses.

Archer, Caster and Berserker have two Noble Phantasms. Pick one for each before you build; the other becomes unusable.

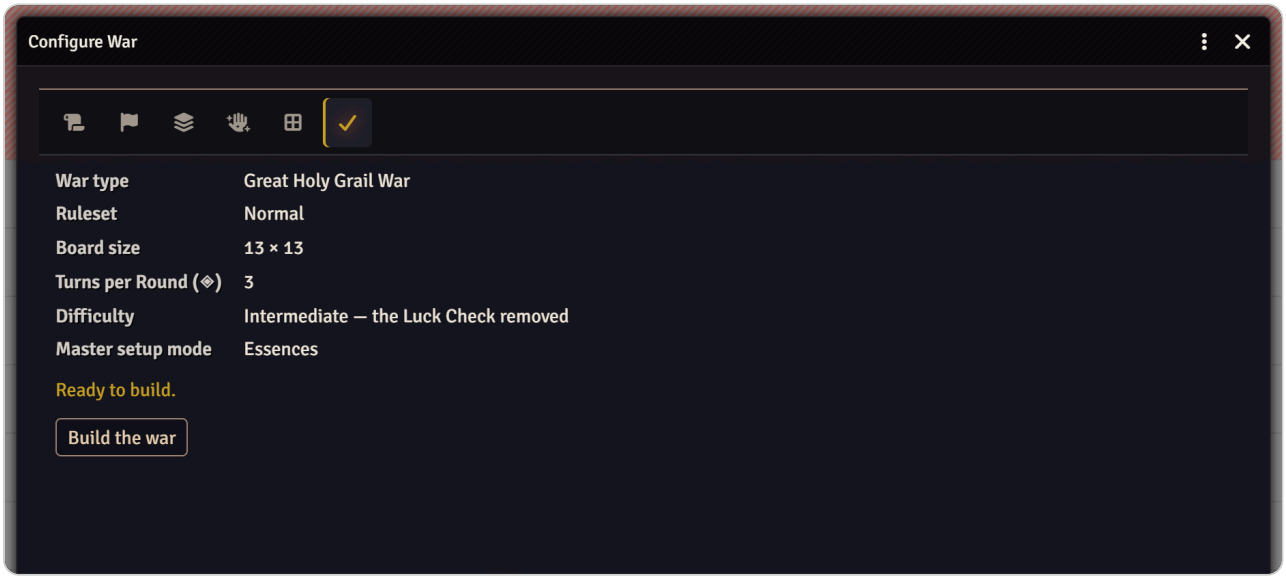

Choose a Noble Phantasm. Ask the player which one they want.

Board and Confirm

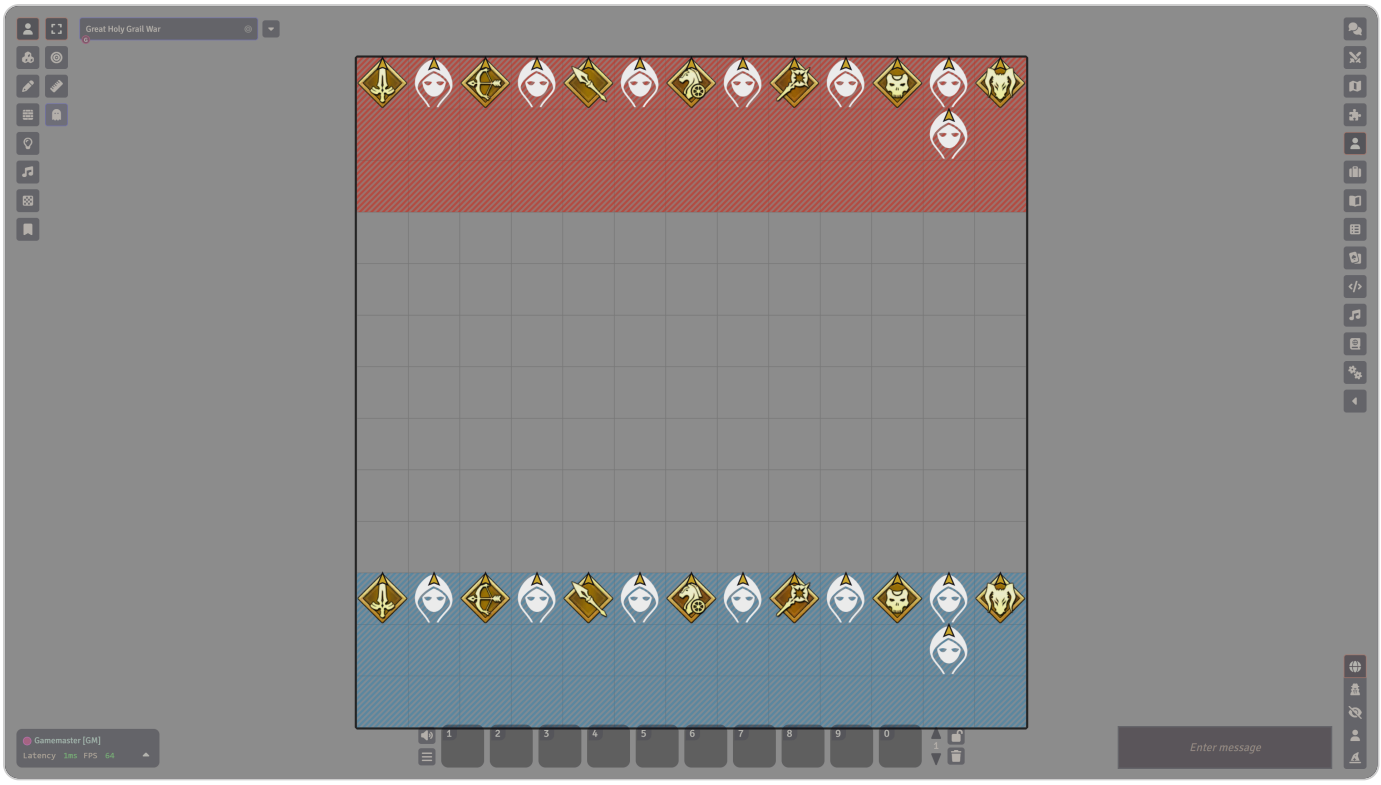

Leave the scene on **— create a new one —**. Each home base is 3 rows deep.

Check the summary, then press **Build the war** and confirm.

The wizard creates the scene, paints both home bases, creates the 28 actors and places their tokens.

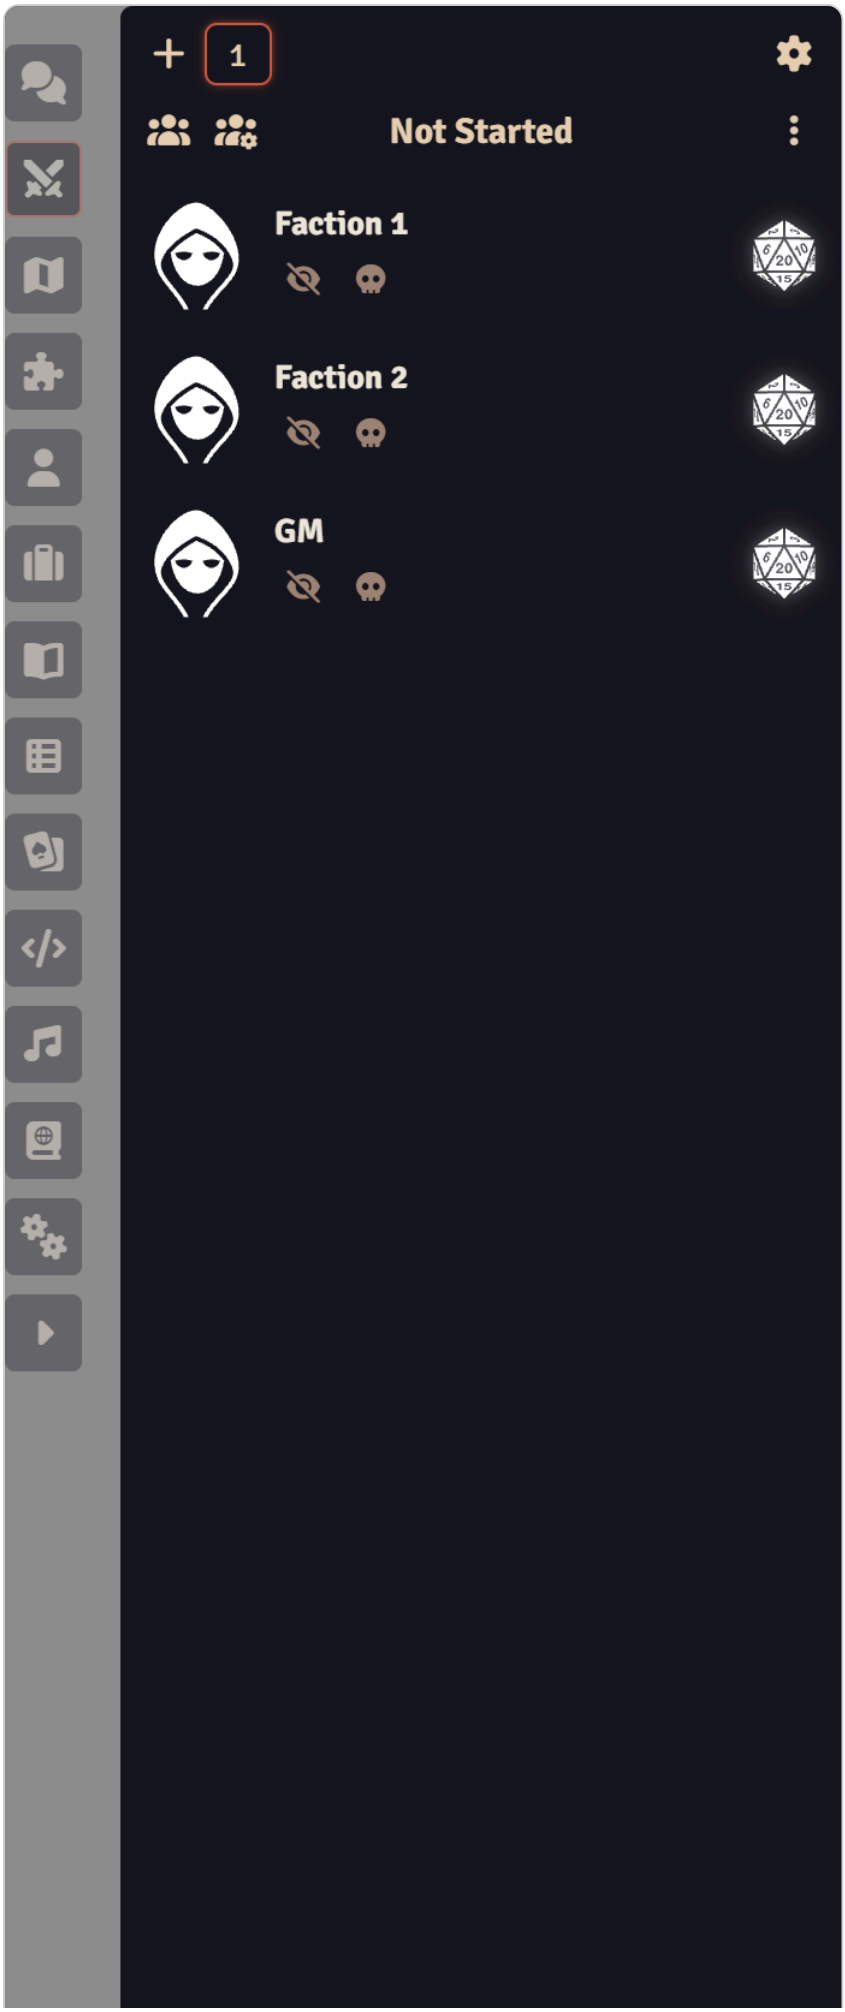

The built war. Red home base at the top, blue at the bottom.

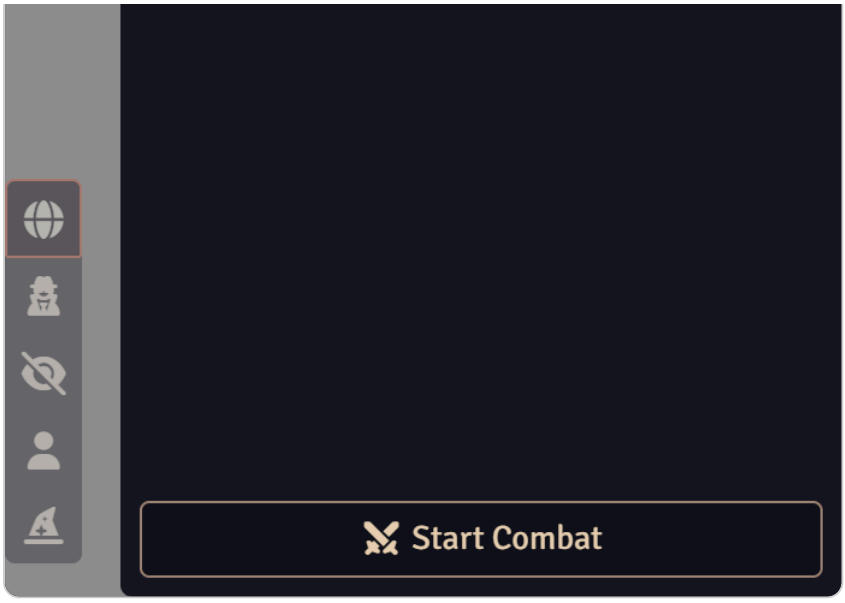

> The wizard locks once a match has started. To build another war, the old match must be ended first.

10. GM: running the match

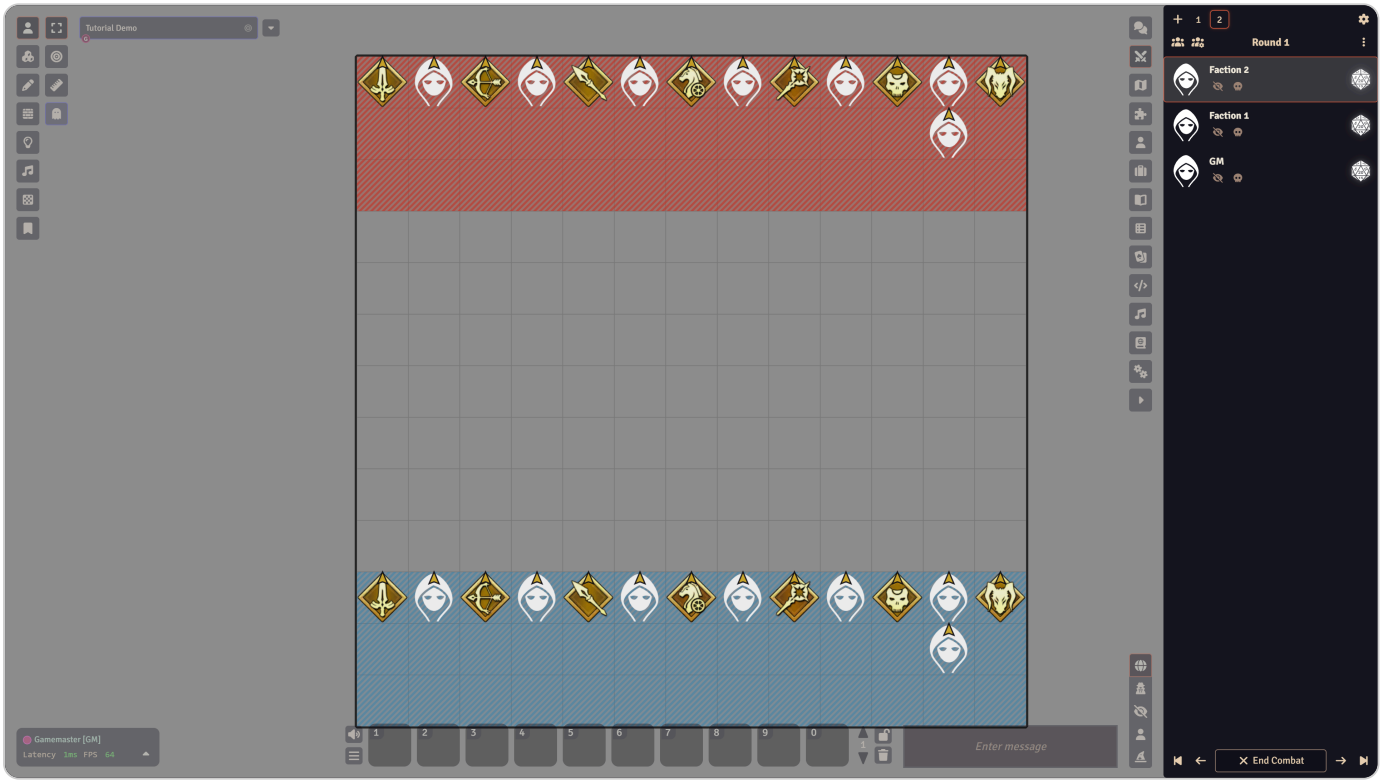

Starting

Open the **Combat** tab of the sidebar. It lists Faction 1, Faction 2 and GM. Press **Start Combat** when everyone is in. The turn order is rolled and Round 1 begins.

1
Not Started
Faction 1
Faction 2
GM

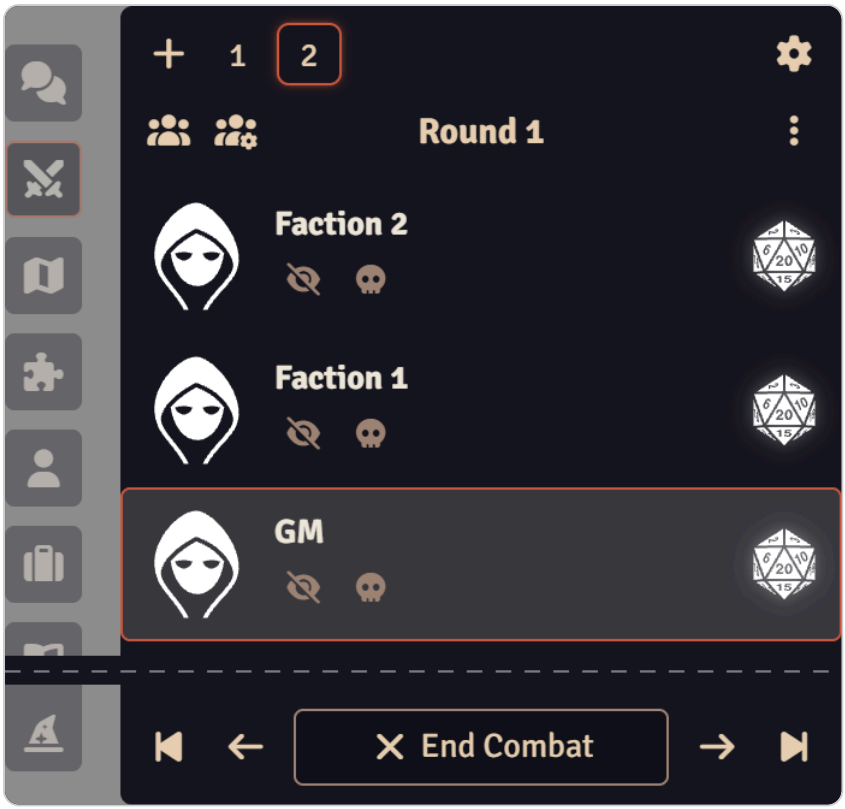

Before the start.

Round 1 has started. Faction 2 won the roll and goes first.

Each Round

1. Each player takes their Turn and presses **End Turn**.
2. The last slot of every Round is the **GM**. Press the → (Next Turn) arrow at the bottom of the tracker to finish it.
3. The next Round starts and the order is rolled again. The GM is always last.

On the GM slot, press the right arrow to start the next Round.

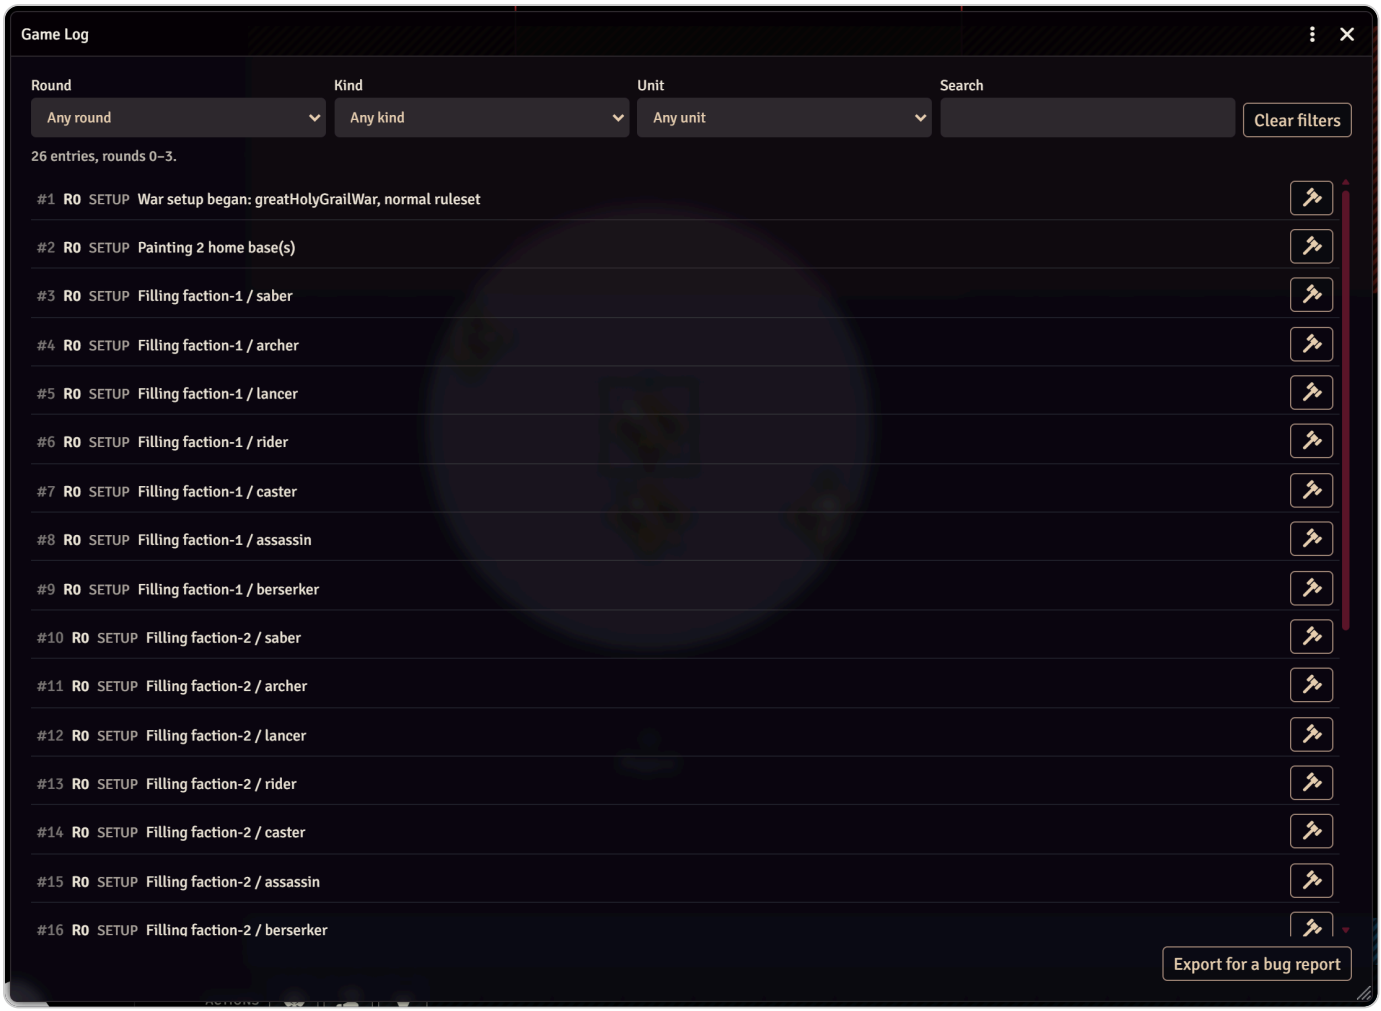

> Only press **End Combat** to end the war. Do not use the back arrows mid-match unless you are correcting a mistake; going back does not undo what already happened.

While the players play

- Keep your GM tab open and in front. Every rule runs on the GM's browser. If the GM leaves, the game stops.
- Use one GM tab only.
- The GM sees every waiting decision in **Awaiting you**. Each waiting card has **Decide for them** if a player is away.
- If an end-of-Turn window opens, answer it before doing anything else.

The Game log

Game log on the Actors tab lists everything that happened, by Round. Filter by Round, kind or unit. **Export for a bug report** saves it for a developer.

The Game log after building the war.

11. When something seems stuck

- **A card says "Waiting for…".** Someone has a decision open. Check **Awaiting you**. Each window closes by itself: 60 seconds for a reaction, 45 for the rest.
- **A card sits on "Interrupt with a Command Spell?".** That is normal. It moves on after 45 seconds.
- **Nothing moves for several minutes.** The GM reloads their browser tab (`F5`). The attack resumes from where it stopped.
- **A player cannot move a token.** It is not their Turn, or that unit already used its move. The token's message says which.
- **A player's screen looks wrong.** They reload their own tab and join again.

12. Quick reference

Timers

Window	Time	If nobody answers
Reaction (Do nothing, Block, Evade)	60 s	Do nothing
Luck Check, Counter, Command Spell	45 s	Decline; nothing is spent

Key Rounds

When	What
Round 1	No attacks of any kind. Move into position.
Round 4	Assassin's Noble Phantasm unlocks.
Round 6	Every other Noble Phantasm unlocks.
After 9 Servants fall	The Holy Grail appears.

The Normal Servants

Class	Base Health	MOV	Range	BA STR / MAG	Sustainability
Saber	1250	4	1	200 / 150	2◈
Archer	750	4	4	100 / 125	5◈
Lancer	1000	5	2	125 / 125	2◈
Rider	1000	8	1	100 / 150	2◈
Caster	750	5	3	50 / 150	4◈
Assassin	500	6	2	50 / 100	1◈
Berserker	750	3	2	100 / 125	2◈

Base Health is before the setup roll of ± 10d20.

Controls

To	Do
Select a unit	Click its token
Open its sheet	Double-click its token
Move	Drag the token
Cycle targets while aiming	`Tab`
Cancel aiming	Right-click or `Esc`
Pan the board	Right-drag on empty board
Zoom	Mouse wheel
